ILLUSTRATIONS SONORES (2001)

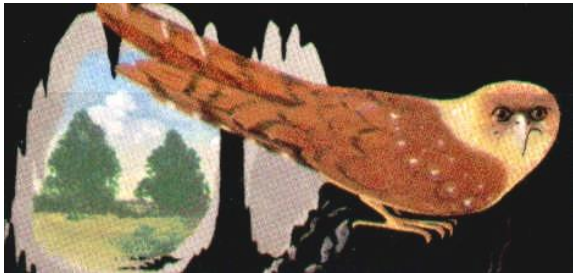

Playasound 360505 (Tk 10)

**Notes:** A notable recording of the sound of the guácharo birds gurgling and scolding vehemently in this Peruvian cave. We also seem to be hearing water running in the background.

This cave is located in the "heart of Peruvian Amazonia" in the Massif de la Bella Dumiente within the Parc Nacional de Tingo Maria, 6 km southwest of Tingo Maria. The cave shelters countless swallows, bats, parrots, and "owls." "Leshuzas" translates as owls and it refers to the oilbirds or guácharo birds.

The guácharo navigate in the cave by echolocation clicks and build their nests in the cave walls. They feed on fruits of peach palm, palm trees, and other plants.

*"En el Perú, las principales cuevas donde habita el guácharo son las Cuevas de San Andrés (Cutervo, Cajamarca), la de las Lechuzas (Tingo María, Huánuco), la de Los Tayos (Amazonas) y las de Ninabamba (Cajamarca)." (Anon. 2008) [In Peru the principal caves where the guácharo live are the Cuevas de San Andrés (Cutervo, Cajamarca), Cuevas de las Lechuzas (Tingo María, Huánuco), Cueva la de Los Tayos (Amazonas), and Cuevas de Ninabamba (Cajamarca).]*

1982 Venezuelan stamp of the Guácharo

A [video](#) looking out toward the cave entrance has the sound of these guácharo birds.
